CFS2160 Additional Material- Week 07 Questions

Create a new Python file in PyCharm and code the following programme.

The programme should contain a function that takes an int as input and returns a string with the text "<inputted value> is an odd number" OR "<inputted value> is an even number" depending on the value of the inputted number.

Create a for loop to iterate through a range() of numbers between 0 to 100, call the function above and pass each of the numbers in the range in turn into the function and print the result.
